Accolade II is the first femoral hip system designed using SOMA – Stryker Orthopaedics Modeling and Analytics technology.

This unique population-based design environment combines one of the world’s largest collections of diverse high-resolution CT scans with powerful 3D modeling and analytics tools. Data from SOMA helped shape Accolade II with its unique Morphometric Wedge design, which features size-specific medial curvature to more closely fit the broad range of bone shapes and sizes found in today’s patient population.1,2*

ACCOLADE II.
Designed to fit more patients, designed to fit your approach™.

* Fit based on 556 CT scans.
